CEQA Initial Study - Environmental Checklist Form (Based on the State CEQA Guidelines, Appendix G Rev. 10/04)

1. Project Number(s)/Environmental Log Number/Title:

TPM 20842, Log No. 04-02-026; Fitzpatrick 4-Lot Tentative Parcel Map

2. Lead agency name and address:

County of San Diego, Department of Planning and Land Use 5201 Ruffin Road, Suite B, San Diego, CA 92123-1666

- a. Contact Amber J. Griffith, Land Use/Environmental Planner
- b. Phone number: (858) 694-2423
- c. E-mail: Amber.Griffith@sdcounty.ca.gov.
- 3. Project location:

The project site is located north of Old Castle Road and west of Airflight Drive in the western portion of Valley Center Community Planning area (APN: 129-291-05-00).

Thomas Brothers Coordinates: Page 1069, Grid F/5

4. Project Applicant name and address:

Thomas Fitzpatrick 4111 Paseo de Las Tortugas Torrance, CA 90505

5. General Plan Designation

Community Plan: Valley Center

Land Use Designation: (17) Estate Residential

Density: 1 du/2, 4 acres

6. Zoning

Use Regulation: A70 Minimum Lot Size: 2 acres Special Area Regulation: None

7. Description of project:

The project is a minor subdivision. The project consists of dividing a 10.8-acre parcel that is currently used for agriculture (orchards and vineyards) into 4 residential lots of 3.0, 3.1, 2.4 and 2.3 acres. Each proposed lot will contain a single-family residence, septic leach field, fire clearing, landscaping and driveway. Access would be provided by a private road connecting to Castlecrest Drive. The project would be served by on-site septic, water imported by the Valley Center Municipal Water District and fire service provided by the Valley Center Fire Protection District. Earthwork will consist of 8,950 cubic yards balance cut/fill of material. The preliminary grading plan shows grading of less than 2,500 cubic yards for each of the proposed pads. The project includes the following off-site improvements: the private easement road from the northeast corner of the subject property to Castlecrest Drive will be graded and improved to 20 feet wide and from Castlecrest Drive to Old Castle Road will be graded to 28 feet wide and improved to 24 feet wide.

8. Surrounding land uses and setting (Briefly describe the project's surroundings):

Surrounding land uses include rural single-family residential and agricultural (mainly orchards & vineyards). Native vegetation is mapped to the northwest of the project site and riparian habitat exists along the western property line.

The elevation of the project site ranges from approximately 1,000 feet to 1,195 feet above mean sea level. Soil types on the property are: Vista coarse sandy loam, Cieneba coarse sandy loam, and Vista rocky coarse sandy loam

9. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

Permit Type/Action	Agency
Minor Grading Permit	County of San Diego
Grading Permit	County of San Diego
Septic Tank Permit	County of San Diego
Tentative Parcel Map	County of San Diego
Water District Approval	Valley Center Municipal Water District
Fire District Approval	Valley Center Fire Protection District

Amber J. Griffith

INSTRUCTIONS ON EVALUATION OF ENVIRONMENTAL IMPACTS

- 1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, Less Than Significant With Mitigation Incorporated, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4. "Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
- 5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are "Less Than Significant With Mitigation Incorporated," describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7. The explanation of each issue should identify:
 - a) The significance criteria or threshold, if any, used to evaluate each question; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significance

I. AESTHETICS -- Would the project:

a)	a) Have a substantial adverse effect on a scenic vista?			
	Potentially Significant Impact Less Than Significant With Mitigation		Less than Significant Impact No Impact	
	Incorporated	_	•	
Discu	ssion/Explanation:			
value highw Nick I a sce	npact: Scenic vistas are singular vantaged viewsheds, including areas designated vays or County designated visual resource Martinez on July 19, 2004, the proposed pric vista and will not change the composite fore, the proposed project will not have a	as offi es. Ba project tion of	cial scenic vistas along major ased on a site visit completed by is not located near or visible from an existing scenic vista.	
b)	Substantially damage scenic resources, outcroppings, and historic buildings with		•	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

No Impact: State scenic highways refer to those highways that are officially designated. A scenic highway is officially designated as a State scenic highway when the local jurisdiction adopts a scenic corridor protection program, applies to the California Department of Transportation for scenic highway approval, and receives notification from Caltrans that the highway has been designated as an official Scenic Highway. Based on a site visit completed by Nicholas Martinez on July 19, 2004, the proposed project is not located near or visible within the same composite viewshed as a State scenic highway and will not change the visual composition of an existing scenic resource within a State scenic highway. Generally, the area defined within a State scenic highway is the land adjacent to and visible from the vehicular right-of-way. The dimension of a scenic highway is usually identified using a motorist's line of vision, but a reasonable boundary is selected when the view extends to the distant horizon. The proposed project site is approximately 7 miles from the I-15 freeway and is not located within the I-15 Scenic Corridor. Therefore, the proposed project will not have any substantial adverse effect on a scenic resource within a State scenic highway.

c)	Substantially degrade the existing visua surroundings?	l chara	acter or quality of the site and its
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: Visual character is the objective composition of the visible landscape within a viewshed. Visual character is based on the organization of the pattern elements line, form, color, and texture. Visual character is commonly discussed in terms of dominance, scale, diversity and continuity. Visual quality is the viewer's perception of the visual environment and varies based on exposure, sensitivity and expectation of the viewers. The existing visual character and quality of the project site and surrounding can be characterized as foothills that are covered with agriculture and native vegetation with single-family residences scattered throughout the peaks and valleys.

The project is compatible with the existing visual environment's visual character and quality for the following reasons: the project site is located on the northwestern slope of a hill not facing any major roads and is surrounded by agricultural and rural residential uses; and the project proposes four single-family residences on lots of two acres or larger in an area where single-family residences exist on lots and the minimum lot size allowed is 2 acres.

The project will not result in cumulative impacts on visual character or quality because the entire existing viewshed and a list of past, present and future projects within that viewshed were evaluated. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered. Those projects listed in Section XVII are located within the viewshed surrounding the project and will not contribute to a cumulative impact for the following reasons: the project does not require significant alteration to the existing landform. The preliminary grading plan shows balanced cuts and fills of no more than 15 feet in height for the creation of building pads, driveways and on-site access road; the addition of four single-family residences fits the texture of the surrounding area which is a mixture of residential and agricultural uses; and single-family residences are of a consistent scale with the surrounding buildings.

Therefore, the project will not result in any adverse project or cumulative level effect on visual character or quality on-site or in the surrounding area.

	- 7 - 0842, Log No. 04-02-026		February 7, 2008

II. AGE	RICULTURAL RESOURCES Would t	he pro	oject:
´ I	Convert Prime Farmland, Unique Farmla Importance (Important Farmland), as sh the Farmland Mapping and Monitoring F Agency, or other agricultural resources,	own o Progra	n the maps prepared pursuant to m of the California Resources
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project site has land designated as Unique Farmland. However, as discussed in the Agricultural Analysis, dated December 14, 2007, prepared by James Chagala and Associates on file with the Department of Planning and Land Use as Environmental Review Number 04-02-026 the project will not

- 8 -

result in a potentially significant project or cumulative level conversion of Unique Farmland for the following reasons: the project will establish parcel sizes ranging from 2.3 to 3.1 acres gross, which are viable for continued agricultural production; the project will not convert any Prime Farmland or Farmland of Statewide Importance; after development of the subdivision, 53.2% of the property will remain available for agricultural uses compared to 50.8% of the surrounding area which is currently in agriculture; buyers of the property will be notified in writing and will acknowledge by signature that agricultural uses and associated nuisances, irritations and inconveniences may exist near to the subject property. In addition, a cumulative analysis of impacts to agricultural resources was completed which considered pending and recently approved projects proposed in the Valley Center Community Plan area. It was found that a total of 662.27 acres of farmlands may be impacted in the Valley Center area, of which 1.53 acres is attributed to the project's individual impact. The direct impact of 1.53 acres of agricultural lands (accounting for building pad and road areas) is not considered cumulatively considerable because the project will create parcel sizes that can continue to support agricultural uses and that are consistent with parcel sizes in the vicinity that also support agriculture. Furthermore, the Department of Agriculture, Weights, and Measures reports that overall agricultural acreage in San Diego County increased by 20,662 acres from 2001 to 2002. Therefore, no potentially significant project or cumulative level conversion of Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Farmland of Local Importance to a nonagricultural use will occur as a result of this project.

b)	(Conflict with existing zoning for agricultu	ıral us	e, or a Williamson Act contract?
		Potentially Significant Impact		Less than Significant Impact
		Less Than Significant With Mitigation Incorporated		No Impact

Discussion/Explanation:

Less Than Significant Impact: The project site is zoned A70 (Limited Agriculture) Use Regulation, which is considered to be an agricultural zone. However, the proposed project will not to result in a conflict in zoning for agricultural use, because residential uses are permitted use in A70 zones and the residences will not create a conflict with existing zoning for agricultural use. Additionally, the project site's land is not under a Williamson Act Contract. Therefore, there will be no conflict with existing zoning for agricultural use, or a Williamson Act contract.

c) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Important Farmland or other agricultural resources, to non-agricultural use?

CEQA Initial Study TPM 20842, Log No. (- 9 - 04-02-026		February 7, 2008	8
☐ Potentially Sig	gnificant Impact	\checkmark	Less than Significant Impact	
Less Than Signature Incorporated	gnificant With Mitigation		No Impact	

Discussion/Explanation:

Less Than Significant Impact: The project site and the surrounding area within a radius of three miles has land designated as Unique Farmland, Farmland of Statewide and Local Importance, Prime Farmland and Grazing land. However, as discussed in the Agricultural Analysis, dated December 14, 2007, prepared by James Chagala on file with the Department of Planning and Land Use as Environmental Review Number 04-02-026, the project will not result in the potentially significant conversion of Prime Farmland, Unique Farmland, Farmland of Statewide Importance or Farmland of Local Importance for the following reasons: the project will establish parcel sizes ranging from 2.3 to 3.1 acres gross, which are viable for continued agricultural production; 41 parcels, or 54% of the parcels within 1,000 feet of this project are in the two to four acre size range, indicating that the density proposed by the project is compatible with the agricultural uses in the area; after development of the subdivision, 53.2% of the property will remain available for agricultural uses compared to 50.8% of the surrounding area which is currently in agriculture; the existing avocado orchard on the site will likely be maintained because of the financial benefit to property owners estimated at \$1,449.00 per acre of producing avocado; buyers of the property will be notified in writing and will acknowledge by signature that agricultural uses and associated nuisances, irritations and inconveniences may exist near to the subject property. In addition, a cumulative analysis of impacts to agricultural resources was completed which considered pending and recently approved projects proposed in the Valley Center Community Plan area. It was found that a total of 662.27 acres of farmlands may be impacted in the Valley Center area, of which 1.53 acres is attributed to the project's individual impact. The direct impact of 1.53 acres of agricultural lands (accounting for building pad and road areas) is not considered cumulatively considerable because the project will create parcel sizes that can continue to support agricultural uses and are consistent with parcel sizes in the vicinity that also support agriculture. Furthermore, the Department of Agriculture, Weights, and Measures reports that overall agricultural acreage in San Diego County increased by 20,662 acres from 2001 to 2002. Therefore, no potentially significant project or cumulative level conversion of Prime Farmland, Unique Farmland, Farmland of Statewide Importance or Farmland of Local Importance to a nonagricultural use will occur as a result of this project.

III. AIR QUALITY -- Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a) Conflict with or obstruct implementation of the San Diego Regional Air Quality Strategy (RAQS) or applicable portions of the State Implementation Plan (SIP)?

	nitial Study 342, Log No. 04-02-026	- 10 -		February 7, 2008	
$\overline{}$	Potentially Significant Impact Less Than Significant With Mitiga Incorporated	ation		Less than Significant Impact No Impact	
Discussi	on/Explanation:				
anticipat Operatio pollutant as identi not expe consiste	Less Than Significant Impact: The project proposes development that was anticipated in SANDAG growth projections used in development of the RAQS and SIP. Operation of the project will not result in emissions of significant quantities of criteria collutants listed in the California Ambient Air Quality Standards or toxic air contaminants as identified by the California Air Resources Board. As such, the proposed project is not expected to conflict with either the RAQS or the SIP. In addition, the project is consistent the SANDAG growth projections used in the RAQS and SIP, therefore, the project will not contribute to a cumulatively considerable impact.				
•	iolate any air quality standard or rojected air quality violation?	contrik	oute s	ubstantially to an existing or	
	Potentially Significant Impact Less Than Significant With Mitiga Incorporated	ation		Less than Significant Impact No Impact	
Dicoucci	on/Evalenction:				

Discussion/Explanation:

In general, air quality impacts from land use projects are the result of emissions from motor vehicles, and from short-term construction activities associated with such projects. The San Diego County Air Pollution Control District (SDAPCD) has established screening-level criteria for all new source review (NSR) in APCD Rule 20.2. For CEQA purposes, these screening-level criteria can be used as numeric methods to demonstrate that a project's total emissions (e.g. stationary and fugitive emissions, as well as emissions from mobile sources) would not result in a significant impact to air quality. Since APCD does not have screening-level criteria for emissions of volatile organic compounds (VOCs), the use of the screening level for reactive organic compounds (ROC) from the CEQA Air Quality Handbook for the South Coast Air Basin (SCAB), which has stricter standards for emissions of ROCs/VOCs than San Diego's, is appropriate. However, the eastern portions of the county have atmospheric conditions that are characteristic of the Southeast Desert Air Basin (SEDAB). SEDAB is not classified as an extreme non-attainment area for ozone and therefore has a less restrictive screening-level. Projects located in the eastern portions of the County can use the SEDAB screening-level threshold for VOCs.

Less Than Significant Impact: The project proposes four single-family residences and a 40-foot road/utility easement. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance, which requires the implementation of dust control measures. Emissions from the

construction phase would be minimal and localized, resulting in pollutant emissions below the screening-level criteria established by SDAPCD Rule 20.2 and by the South Coast Air Quality Management District (SCAQMD) CEQA Air Quality Handbook section 6.2 and 6.3. In addition, the vehicle trips generated from the project will result in 48 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the Screening-Level Criteria established by SDAPCD Rule 20.2 and by the SCAQMD CEQA Air Quality Handbook section 6.2 and 6.3 for criteria pollutants. As such, the project will not violate any air quality standard or contribute substantially to an existing or projected air quality violation.

,	Result in a cumulatively considerable new which the project region is non-attainme ambient air quality standard (including requantitative thresholds for ozone precure	nt und eleasii	der an applicable federal or state ng emissions which exceed
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

San Diego County is presently in non-attainment for the 1-hour concentrations under the California Ambient Air Quality Standard (CAAQS) for Ozone (O₃). San Diego County is also presently in non-attainment for the annual geometric mean and for the 24-hour concentrations of Particulate Matter less than or equal to 10 microns (PM₁₀) under the CAAQS. O₃ is formed when volatile organic compounds (VOCs) and nitrogen oxides (NO_x) react in the presence of sunlight. VOC sources include any source that burns fuels (e.g., gasoline, natural gas, wood, oil); solvents; petroleum processing and storage; and pesticides. Sources of PM₁₀ in both urban and rural areas include: motor vehicles, wood burning stoves and fireplaces, dust from construction, landfills, agriculture, wildfires, brush/waste burning, and industrial sources of windblown dust from open lands.

Less Than Significant Impact: Air quality emissions associated with the project include emissions of PM₁₀, NO_x and VOCs from construction/grading activities, and VOCs as the result of increase of traffic from operations at the site. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance, which requires the implementation of dust control measures. Emissions from the construction phase would be minimal and localized, resulting in PM₁₀ and VOC emissions below the screening-level criteria established by SDAPCD Rule 20.2 and by the South Coast Air Quality Management District (SCAQMD) CEQA air quality handbook section 6.2 and 6.3. The vehicle trips generated from the project will result in 48 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are

below the Screening-Level Criteria established by SDAPCD Rule 20.2 and by the SCAQMD CEQA air quality handbook section 6.2 and 6.3 for VOCs and PM₁₀.

In addition, a list of past, present and future projects within the surrounding area were evaluated and none of these projects emit significant amounts of criteria pollutants. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered. The proposed project as well as the past, present and future projects within the surrounding area, have emissions below the screening-level criteria established by SDAPCD Rule 20.2 and by the SCAQMD CEQA air quality handbook section 6.2 and 6.3, therefore, the construction and operational emissions associated with the proposed project are not expected to create a cumulatively considerable impact nor a considerable net increase of PM10, or any O₃ precursors.

▽	Potentially Significant Impact Less Than Significant With Mitigation		Less than Significant Impact No Impact
Į.	Incorporated		πο πηρασί

Discussion/Explanation:

Less Than Significant With Mitigation Incorporated: Based on County records, staff field site visits and biological resources map dated December 19, 2007 prepared by Bill Everett, the 10.8-acre site consists of 10.2 acres of orchards and vineyards with a small

- 14 -

amount (0.57-acre) of southern willow scrub. The entire area of riparian habitat, southern willow scrub, will be placed within an open space easement and will not be impacted by the proposed project. Additionally, the preserve area that includes a 50foot wide wetland buffer, will be separated from proposed development by a 100-foot wide limited building zone easement and fencing. Land disturbance during bird breeding season will be restricted as a condition of approval. No other sensitive natural communities have been identified on-site. Therefore, the project will not have an adverse effect on any riparian habitat or other sensitive natural community.

Lavo a substantial adverse effect on federally protected wetlands as defined by

c) [Directly or indirectly destroy a unique	ue gec	ologic	feature?	
	Potentially Significant Impact Less Than Significant With Mitiga Incorporated	ation		Less than Significant Impact No Impact	
Discuss	sion/Explanation:				
No Impact: Unique Geologic Features – The site does not contain any unique geologic features that have been catalogued within the Conservation Element (Part X) of the County's General Plan (see Appendix G for a listing of unique geological features) or support any known geologic characteristics that have the potential to support unique geologic features. Additionally, based on a site visit by Nick Martinez on July 19, 2004 no known unique geologic features were identified on the property or in the immediate vicinity.					
d) Directly or indirectly destroy a unique paleontological resource or site?					
Discuss	Potentially Significant Impact Less Than Significant With Mitiga Incorporated sion/Explanation:	ation		Less than Significant Impact No Impact	
שושטפוע	οιοιη Εχριατιατίστι.				

No Impact: A review of the County's Paleontological Resources Maps indicates that the project is located entirely on plutonic igneous rock and has no potential for producing fossil remains.

e)	Disturb any human remains, including the cemeteries?	nose ii	nterred outside of formal
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

No Impact: Based on an analysis of records and a survey of the property by a County of San Diego *staff archaeologist*, Gail Wright, on September 13, 2004, it has been determined that the project will not disturb any human remains because the project site does not include a formal cemetery or any archaeological resources that might contain interred human remains. The results of the survey are provided in an archaeological survey report titled, "Cultural Resources Survey Report for TPM 20842, Log No. 04-02-026 – Fitzpatrick Minor Subdivision, APN 129-291-05; Negative Findings", prepared by Gail Wright September 13, 2004.

VI. GEOLOGY AND SOILS -- Would the project:

- a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:
 - i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

П	Potentially Significant Impact	П	Less than Significant Impact
	Less Than Significant With Mitigation Incorporated		•

Discussion/Explanation:

No Impact: The project is not located in a fault rupture hazard zone identified by the Alquist-Priolo Earthquake Fault Zoning Act, Special Publication 42, Revised 1997, Fault-Rupture Hazards Zones in California, or located within any other area with substantial evidence of a known fault. Also, staff geologist Laura Maghsoudlou has reviewed the project and has concluded that no other substantial evidence of recent (Holocene) fault activity is present within the project site. Therefore, there will be no impact from the exposure of people or structures to adverse effects from a known

hazard zone as a result of this project. Therefore, there will be no impact from the exposure of people or structures to adverse effects from a known hazard zone as a result of this project.

ii. Strong seismic ground shaking? Potentially Significant Impact Less than Significant Impact Less Than Significant With Mitigation No Impact No Impact					
Less Than Significant With Mitigation Incorporated Discussion/Explanation: No Impact: The Uniform Building Code (UBC) and the California Building Code (CBC) classifies all San Diego County with the highest seismic zone criteria, Zone 4. However, the project is not located within 5 kilometers of the centerline of a known active-fault zone as defined within the Uniform Building Code's Maps of Known Active Fault Near-Source Zones in California. In addition, the project will have to conform to the Seismic Requirements Chapter 16 Section 162- Earthquake Design as outlined within the California Building Code. Section 162 requires a soils compaction report with proposed foundation recommendations to be approved by a County Structural Engineer before the issuance of a building or grading permit. Therefore, there will be no impact from the exposure of people or structures to potential adverse effects from strong seismic ground shaking as a result of this project. iii. Seismic-related ground failure, including liquefaction? Potentially Significant Impact Less than Significant Impact Security. In addition, the site is not underlain by poor artificial fill or located within a floodplain. Therefore, there will be no impact from the exposure of people to adverse effects from a known area susceptible to ground failure. iv. Landslides? Less than Significant Impact	ii	i.	Strong seismic ground shaking?		
No Impact: The Uniform Building Code (UBC) and the California Building Code (CBC) classifies all San Diego County with the highest seismic zone criteria, Zone 4. In or located within a floodplain.
Loss Than Significant With Mitigation					Land them Olive History Land at
Incorporated No Impact		Less	Than Significant With Mitigation	\Box	No Impact

Discussion/Explanation:

No Impact: The site is not located within a landslide susceptibility zone. Also, staff geologist Laura Maghsoudlou has determined that the geologic environment of the project area has a low probability to be located within an area of potential or pre-existing conditions that could become unstable in the event of seismic activity.

b)	Result in substantial soil erosion or the	loss of	f topsoil?
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: According to the Soil Survey of San Diego County, the soils on-site are identified as VsE2 (Vista coarse sandy loam, 15 to 30 percent slopes, eroded); VvE (Vista rocky coarse sandy loam, 15 to 30 percent slopes); and CIE2 (Cieneba coarse sandy loam, 15 to 30 percent slopes, eroded) which have soil erodibility ratings of "moderate", "moderate, and "severe" (respectively) as indicated by the Soil Survey for the San Diego Area, prepared by the US Department of Agriculture, Soil Conservation and Forest Service dated December 1973. However, the project will not result in substantial soil erosion or the loss of topsoil for the following reasons:

- The project will not result in unprotected erodible soils; will not alter existing drainage patterns; is not located in a floodplain, wetland, or significant drainage feature; and will not develop steep slopes.
- The project has prepared a Stormwater Management Plan dated January 18, 2006, prepared by William Karn Surveying, Inc. The plan includes the following Best Management Practices to ensure sediment does not erode from the project site: silt fence, fiber rolls, gravel bags, stockpile management, stabilized construction entrance/exit, water conservation practices, and any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope.
- The project involves grading. However, the project is required to comply with the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING). Compliance with these regulations minimizes the potential for water and wind erosion.

Due to these factors, it has been found that the project will not result in substantial soil erosion or the loss of topsoil on a project level.

In addition, the project will not contribute to a cumulatively considerable impact because all the of past, present and future projects included on the list of projects that involve grading or land disturbance are required to follow the requirements of the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING); Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); and County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

c)	impacts resulting from landslides, lateral collapse?

g)		mpair implementation of or physically in esponse plan or emergency evacuation		•
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

- 2

Discussion/Explanation:

The following sections summarize the project's consistency with applicable emergency response plans or emergency evacuation plans.

i. OPERATIONAL AREA EMERGENCY PLAN:

Less Than Significant Impact: The Operational Area Emergency Plan is a framework document that provides direction to local jurisdictions to develop specific operational area of San Diego County. It provides guidance for emergency planning and requires subsequent plans to be established by each jurisdiction that has responsibilities in a disaster situation. The project will not interfere with this plan because it will not prohibit subsequent plans from being established.

ii. SAN DIEGO COUNTY NUCLEAR POWER STATION EMERGENCY RESPONSE PLAN

No Impact: The San Diego County Nuclear Power Station Emergency Response Plan will not be interfered with by the project due to the location of the project, plant and the specific requirements of the plan. The emergency plan for the San Onofre Nuclear Generating Station includes an emergency planning zone within a 10-mile radius. All land area within 10 miles of the plant is not within the jurisdiction of the unincorporated County and as such a project in the unincorporated area is not expected to interfere with any response or evacuation.

iii. OIL SPILL CONTINGENCY ELEMENT

No Impact: The Oil Spill Contingency Element will not be interfered with because the project is not located along the coastal zone or coastline.

iv. EMERGENCY WATER CONTINGENCIES ANNEX AND ENERGY SHORTAGE RESPONSE PLAN

No Impact: The Emergency Water Contingencies Annex and Energy Shortage Response Plan will not be interfered with because the project does not propose altering major water or energy supply infrastructure, such as the California Aqueduct.

v. DAM EVACUATION PLAN

No Impact: The Dam Evacuation Plan will not be interfered with because the project is located outside a dam inundation zone.

h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

	nitial Study 1842, Log No. 04-02-026	- 25 -		February 7, 2008

	Potentially Significant Impact Less Than Significant With Mitiga Incorporated	ation [□ ☑	Less than Significant Impact No Impact

Discussion/Explanation:

Discussion/Explanation:

No Impact: The project does not involve or support uses that allow water to stand for a period of 72 hours (3 days) or more (e.g. artificial lakes, agricultural irrigation ponds). Also, the project does not involve or support uses that will produce or collect animal waste, such as equestrian facilities, agricultural operations (chicken coops, dairies etc.), solid waste facility or other similar uses. Moreover, based on a site visit conducted by Nicholas Martinez on July 19, 2004, there are none of these uses on adjacent properties. Therefore, the project will not substantially increase current or future resident's exposure to vectors, including mosquitoes, rats or flies.

VIII. HYDROLOGY AND WATER QUALITY -- Would the project:

a)	\	/iolate any waste discharge requiremer	its?	
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The project proposes the construction of four residences and an on-site private road which requires NPDES General Permit for Discharges of Storm Water Associated with Construction Activities. The project applicant has provided a copy of a Storm Water Management Plan for Priority Projects dated January 18, 2006 which demonstrates that the project will comply with all requirements of NPDES. The project site proposes and will be required to implement the following site design measures and/or source control BMPs and/or treatment control BMPs to reduce potential pollutants to the maximum extent practicable from entering storm water runoff: silt fencing, fiber rolls, gravel bags, stockpile management, solid waste management, stabilized construction entrance/exit, spill prevention and control, drainage of impervious surfaces onto adjacent landscaping, and swale system to move water from streets to vegetated swale/biofilter. These measures will enable the project to meet waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. 2001-01), as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP).

Finally, the project's conformance to the waste discharge requirements listed above ensures the project will not create cumulatively considerable water quality impacts related to waste discharge because, through the permit, the project will conform to Countywide watershed standards in the JURMP and SUSMP, derived from State regulation to address human health and water quality concerns. Therefore, the project will not contribute to a cumulatively considerable impact to water quality from waste discharges.

b) Is the project tributary to an already impaired water body, as listed on the C Water Act Section 303(d) list? If so, could the project result in an increase i pollutant for which the water body is already impaired?						
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact			

Discussion/Explanation:

Less Than Significant Impact: The project lies in the 903.13/Moosa hydrologic subarea, within the San Luis Rey hydrologic unit. According to the Clean Water Act Section 303(d) list, July 2003, although the mouth of the San Luis Rey is impaired for coliform bacteria, no portion of the San Luis Rey River, which is tributary to the Pacific Ocean, is impaired. Constituents of concern in the San Luis Rey River watershed include coliform bacteria, nitrate, sediment, and pesticides.

The project proposes the following activities that are associated with these pollutants: residential land use that may involve keeping outdoor pets whose waste is associated with coliform bacteria; residential lawns may use fertilizers that contain nitrates; and grading during construction exposes bare soil and thereby increases sedimentation to waterbodies. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed such that potential pollutants will be reduced in any runoff to the maximum extent practicable so as not to increase the level of these pollutants in receiving waters: during construction silt fencing, gravel bags and fiber rolls will reduce erosion and subsequent sedimentation in downstream waterbodies; after construction pollutants and sediments will be reduced from the stormwater flow by being diverted to a grassy swale prior to discharge.

The proposed BMPs are consistent with regional surface water and storm water planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result the project will not contribute to a cumulative impact to an already impaired water body, as listed on the Clean Water Act Section 303(d). Regional surface water and storm water permitting regulation for County of San Diego, Incorporated Cities of San Diego County, and San Diego Unified Port District includes the following: Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). The stated purposes of these ordinances are to protect the health, safety and general welfare of the County of San Diego residents; to protect water resources and to improve water quality; to cause the use of management practices by the County and its citizens that will reduce the adverse effects of polluted runoff discharges on waters of the state; to secure benefits from the use of storm water as a resource; and to ensure the County is compliant with applicable state and federal laws. Ordinance No. 9424 (WPO) has discharge prohibitions, and

- 28 -

requirements that vary depending on type of land use activity and location in the County. Ordinance No. 9426 is Appendix A of Ordinance No. 9424 (WPO) and sets out in more detail, by project category, what Dischargers must do to comply with the Ordinance and to receive permits for projects and activities that are subject to the Ordinance. Collectively, these regulations establish standards for projects to follow which intend to improve water quality from headwaters to the deltas of each watershed in the County. Each project subject to WPO is required to prepare a Stormwater Management Plan that details a project's pollutant discharge contribution to a given watershed and propose BMPs or design measures to mitigate any impacts that may occur in the watershed.

c) Could the proposed project cause or contribute to an exceedance of appl surface or groundwater receiving water quality objectives or degradation beneficial uses?						
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact			

Discussion/Explanation:

Less Than Significant Impact: The Regional Water Quality Control Board has designated water quality objectives for waters of the San Diego Region as outlined in Chapter 3 of the Water Quality Control Plan (Plan). The water quality objectives are necessary to protect the existing and potential beneficial uses of each hydrologic unit as described in Chapter 2 of the Plan.

The project lies in the 903.13/Moosa hydrologic subarea, within the San Luis Rey hydrologic unit that has the following existing and potential beneficial uses for inland surface waters, coastal waters, reservoirs and lakes, and ground water: municipal and domestic supply; agricultural supply; industrial process supply; industrial service supply; freshwater replenishment; hydropower generation; contact water recreation; non-contact water recreation; warm freshwater habitat; cold freshwater habitat; wildlife habitat; marine habitat; migration of aquatic organisms; and, rare, threatened, or endangered species habitat.

The project proposes the following potential sources of polluted runoff: construction activities and parking areas. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed to reduce potential pollutants in runoff to the maximum extent practicable, such that the proposed project will not cause or contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses: during construction silt fencing, gravel bags and fiber rolls will reduce erosion and subsequent sedimentation in downstream waterbodies; after construction pollutants and sediments will be reduced from the stormwater flow by being diverted to a grassy swale prior to discharge.

In addition, the proposed BMPs are consistent with regional surface water, storm water and groundwater planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result, the project will not contribute to a cumulatively considerable exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses. Refer to Section VIII., Hydrology and Water Quality, Question b, for more information on regional surface water and storm water planning and permitting process.

d)	Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?						
	1		Less than Significant Impact				
	Less Than Significant With Mitigation Incorporated	$\overline{\checkmark}$	No Impact				
Discu	ssion/Explanation:						
Districe project comming interfect following groun mile).	No Impact: The project will obtain its water supply from the Valley Center Water District that obtains water from surface reservoirs or other imported water source. The project will not use any groundwater for any purpose, including irrigation, domestic or commercial demands. In addition, the project does not involve operations that would interfere substantially with groundwater recharge including, but not limited to the following: the project does not involve regional diversion of water to another groundwater basin; or diversion or channelization of a stream course or waterway with impervious layers, such as concrete lining or culverts, for substantial distances (e.g. ¼ mile). These activities and operations can substantially affect rates of groundwater recharge. Therefore, no impact to groundwater resources is anticipated.						
e)	Substantially alter the existing drainage through the alteration of the course of a result in substantial erosion or siltation of the course of a result in substantial erosion or siltation of the course of a result in substantial erosion or siltation of the course of	strear	m or river, in a manner which would				
	, , , , , , , , , , , , , , , , , , ,	$\overline{\checkmark}$	Less than Significant Impact				
	Less Than Significant With Mitigation Incorporated		No Impact				
Discussion / Fundametica.							

Discussion/Explanation:

Less Than Significant Impact: The project proposes a four-lot minor subdivision. As outlined in the Storm water Management Plan (SWMP) dated December 30, 2005 and prepared by William Karn Surveying, Inc., the project will implement the following site design measures, source control, and/or treatment control BMPs to reduce potential

pollutants, including sediment from erosion or siltation, to the maximum extent practicable from entering storm water runoff: grass swale, rip-raps. These measures will control erosion and sedimentation and satisfy waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. 2001-01), as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP). The SWMP specifies and describes the implementation process of all BMPs that will address equipment operation and materials management, prevent the erosion process from occurring, and prevent sedimentation in any onsite and downstream drainage swales. The Department of Public Works will ensure that the Plan is implemented as proposed. Due to these factors, it has been found that the project will not result in significantly increased erosion or sedimentation potential and will not alter any drainage patterns of the site or area on- or off-site. In addition, because erosion and sedimentation will be controlled within the boundaries of the project, the project will not contribute to a cumulatively considerable impact. For further information on soil erosion refer to VI., Geology and Soils, Question b.

through the alteration of the course of a stream or river, or substantially incre the rate or amount of surface runoff in a manner which would result in floodir on- or off-site?						
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact			

Discussion/Explanation:

Less Than Significant Impact: The proposed project will not significantly alter established drainage patterns or significantly increase the amount of runoff for the following reasons, based on a Drainage Study prepared by Hadley Johnson; William Karn Surveying submitted to DPLU on August 24, 2005, drainage will be conveyed to either natural drainage channels or approved drainage facilities.

Therefore, the project will not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding onor off-site. Moreover, the project will not contribute to a cumulatively considerable alteration or a drainage pattern or increase in the rate or amount of runoff, because the project will substantially increase water surface elevation or runoff exiting the site, as detailed above.

g) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems?

ii. T	ii. TSUNAMI						
No Impact: The project site is located more than a mile from the coast; therefore, in the event of a tsunami, would not be inundated.							

iii.

MUDFLOW

No Impact: Mudflow is type of landslide. The site is not located within a landslide susceptibility zone. Also, staff geologist Laura Maghsoudlou has determined that the geologic environment of the project area has a low probability to be located within an area of potential or pre-existing conditions that could become unstable in the event of seismic activity. In addition, though the project does propose land disturbance that will expose unprotected soils, the project is not located downstream from unprotected, exposed soils within a landslide susceptibility zone. Therefore, it is not anticipated that the project will expose people or property to inundation due to a mudflow.

IX. LAND USE AND PLANNING -- Would the project:

a)	Physically divide an established commu	nity?				
	Potentially Significant Impact Less Than Significant With Mitigation		Less than Significant Impact

Discu	ssion/Explanation:					
roadw	No Impact: The project does not propose the introducing new infrastructure such major roadways or water supply systems, or utilities to the area. Therefore, the proposed project will not significantly disrupt or divide the established community.					
b)	Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?					
	Potentially Significant Impact	\checkmark	Less than Significant Impact			
	Less Than Significant With Mitigation Incorporated		No Impact			
Discussion/Explanation:						

Less Than Significant Impact: The proposed project is subject to the Regional Land Use Element Policy 2.4 Non-Urban Residential and General Plan Land Use Designation (17) Estate Residential. The General Plan requires minimum gross parcel sizes of 2 to 4 acres depending on slope and not more than 0.5 dwelling units per acre. The proposed project has gross parcel sizes and density that are consistent with the General Plan. The project is subject to the policies of the Valley Center Community Plan. The proposed project is consistent with the policies of the Valley Center Community Plan. The current zone is A70, which requires a net minimum lot size of 0.5 acres. The proposed project is consistent with the Zoning Ordinance requirements for minimum lot size.

		Potentially Significant Impact	$\overline{\checkmark}$	Less than Significant Impact		
		Less Than Significant With Mitigation Incorporated		No Impact		

Discussion/Explanation:

Less Than Significant Impact: The project is a minor residential subdivision and will be occupied by residents. Based on a site visit completed by Nicholas Martinez on July 19, 2004, the surrounding area supports agricultural and single-family (2-acre minimum lot size) residential and is occupied by residents. The project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable standards for the following reasons:

General Plan - Noise Element

The County of San Diego General Plan, Noise Element, Policy 4b addresses noise sensitive areas and requires an acoustical study to be prepared for any use that may expose noise sensitive areas to noise in excess of a Community Noise Equivalent Level (CNEL) of 60 decibels (dBA). Moreover, if the project is in excess of CNEL 60 dB(A), modifications must be made to the project to reduce noise levels. Noise sensitive areas include residences, hospitals, schools, libraries or similar facilities where quiet is an important attribute. Project implementation is not expected to expose existing or planned noise sensitive areas to road, airport, heliport, railroad, industrial or other noise in excess of the CNEL 60 dB(A). This is based on staff's review of projected County noise contour maps (CNEL 60 dB(A) contours). Therefore, the project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, Noise Element.

Noise Ordinance - Section 36-404

Non-transportation noise generated by the project is not expected to exceed the standards of the County of San Diego Noise Ordinance (Section 36-404) at or beyond the project's property line. The site is zoned A70 that has a one-hour average sound limit of 50 decibels (45 decibels from 10 p.m. to 7 a.m.). The adjacent properties are also zoned A70 and have the same one-hour average sound limits. Based on review by staff the project's noise levels are not anticipated to impact adjoining properties or exceed County Noise Standards, because the project does not involve any noise producing equipment that would exceed applicable noise levels at the adjoining property line.

Noise Ordinance – Section 36-410

The project will not generate construction noise that may exceed the standards of the County of San Diego Noise Ordinance (Section 36-410). Construction operations will occur only during permitted hours of operation pursuant to Section 36-410. Also, It is not anticipated that the project will operate construction equipment in excess of an average sound level of 75dB between the hours of 7 AM and 7 PM.

Finally, the project's conformance to the County of San Diego General Plan (Noise Element, Policy 4b and County of San Diego Noise Ordinance (Section 36-404 and 36.410) ensures the project will not create cumulatively considerable noise impacts, because the project will not exceed the local noise standards for noise sensitive areas;

and the project will not exceed the applicable noise level limits at the property line or construction noise limits, derived from State regulation to address human health and quality of life concerns. Therefore, the project will not contribute to a cumulatively considerable exposure of persons or generation of noise levels in excess of standards established in the local general plan, noise ordinance, and applicable standards of other agencies.

b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?							
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact				
Discus	sion/Explanation:						
single-i essenti setback contou use; or do not noise le Assess by any	Than Significant Impact: The project profession of the project profession of the project profession of the project of the proj	larger conditi Right r parce ck of 2 ground nc., <i>Tra</i> sures	where low ambient vibration is ions. However, the facilities are to-of-Way with projected noise els zoned industrial or extractive 200 feet ensures that the operations aborne vibration or groundborne ensit Noise and Vibration Impact that the project will not be affected				
Also, the project does not propose any major, new or expanded infrastructure such as mass transit, highways or major roadways or intensive extractive industry that could generate excessive groundborne vibration or groundborne noise levels and impact vibration sensitive uses in the surrounding area.							
Therefore, the project will not expose persons to or generate excessive groundborne vibration or groundborne noise levels on a project or cumulative level.							
,	c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?						
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact				

Discussion/Explanation:

- 37 -

Less Than Significant Impact: The project involves the following permanent noise sources that may increase the ambient noise level: residential activities and personal automobile use. As indicated in the response listed under Section XI Noise, Question a., the project would not expose existing or planned noise sensitive areas in the vicinity to a substantial permanent increase in noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable local, State, and Federal noise control. Also, the project is not expected to expose existing or planned noise sensitive areas to noise 10 dB CNEL over existing ambient noise levels based on review of the project by County staff. Studies completed by the Organization of Industry Standards (ISO 362; ISO 1996 1-3; ISO 3095; and ISO 3740-3747) state an increase of 10 dB is perceived as twice as loud and is perceived as a significant increase in the ambient noise level.

The project will not result in cumulatively noise impacts because a list of past, present and future projects within in the vicinity were evaluated. It was determined that the project in combination with a list of past, present and future project would not expose existing or planned noise sensitive areas to noise 10 dB CNEL over existing ambient noise levels. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

,	A substantial temporary or periodic increvicinity above levels existing without the		• •
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	☑	Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project does not involve any uses that may create substantial temporary or periodic increases in ambient noise levels in the project vicinity including but not limited to extractive industry; outdoor commercial or industrial uses that involve crushing, cutting, drilling, grinding, or blasting of raw materials; truck depots, transfer stations or delivery areas; or outdoor sound systems.

Also, general construction noise is not expected to exceed the construction noise limits of the County of San Diego Noise Ordinance (Section 36-410), which are derived from State regulations to address human health and quality of life concerns. Construction operations will occur only during permitted hours of operation pursuant to Section 36-410. Also, it is not anticipated that the project will operate construction equipment in excess of 75 dB for more than an 8 hours during a 24-hour period. Therefore, the project would not result in a substantial temporary or periodic increase in existing ambient noise levels in the project vicinity.

February 7, 2008

e)	For a project located within an airport land not been adopted, within two miles of a the project expose people residing or we noise levels?	public	airport or public use airport, would	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discus	ssion/Explanation:			
No Impact: The proposed project is not located within a Comprehensive Land Use Plan (CLUP) for airports or within 2 miles of a public airport or public use airport. Therefore, the project will not expose people residing or working in the project area to excessive airport-related noise levels.				
f)	For a project within the vicinity of a private people residing or working in the project			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

Less Than Significant Impact: The proposed project is located within a one-mile vicinity of the Blackinton private airstrip. The airstrip is located 0.5 miles east relative to the project site. However, project implementation is not expected to expose people residing or working in the project area to excessive noise levels in excess of the CNEL 60 dB(A). This is based on staff's review of projected County noise contour maps (CNEL 60 dB(A) contours). The location of the project is outside of the CNEL 60 dB(A) contours for the airport.

In addition, based on the list of past, present and future projects there are no new or expanded public airports projects in the vicinity that may extend the boundaries of the CNEL 60 dB noise contour or CLUP. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered. Therefore, the project will not expose people residing or working in the project area to excessive airport-related noise on a project or cumulative level.

XII. POPULATION AND HOUSING -- Would the project:

a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

	nitial Study 9842, Log No. 04-02-026	- 39 -		February 7, 2008

XIII. PUBLIC SERVICES

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios,

11 W 20042, Log 140. 04 02 020				
response times or other performance service ratios, response times or other performance objectives for any of the public services:				
i. Fire protection?ii. Police protection?iii. Schools?iv. Parks?v. Other public facilities?				
☐ Potentially Significant Impact	\checkmark	Less than Significant Impact		
Less Than Significant With Mitigation Incorporated		No Impact		
Discussion/Explanation:				
Less Than Significant Impact: Based on the service availability forms received for the project, the proposed project will not result in the need for significantly altered services or facilities. Service availability forms have been provided which indicate existing services are available to the project from the following agencies/districts: Valley Center Fire Protection District, Valley Center Municipal Water District, Valley Center Elementary School District, and Valley Center High School District. The project does not involve the construction of new or physically altered governmental facilities including but not limited to fire protection facilities, sheriff facilities, schools, or parks in order to maintain acceptable service ratios, response times or other performance service ratios or objectives for any public services. Therefore, the project will not have an adverse ohysical effect on the environment because the project does not require new or significantly altered services or facilities to be constructed.				
XIV. RECREATION				
would the project increase the use of exor other recreational facilities such that facility would occur or be accelerated?				
☐ Potentially Significant Impact	\checkmark	Less than Significant Impact		
Less Than Significant With Mitigation Incorporated		No Impact		

Less Than Significant Impact: The project involves a minor residential subdivision that will increase the use of existing neighborhood and regional parks or other recreational facilities. To avoid substantial physical deterioration of local recreation facilities the project will be required to pay fees or dedicate land for local parks to the County pursuant to the Park Land Dedication Ordinance (PLDO). The Park Land

Dedication Ordinance (PLDO) is the mechanism that enables the funding or dedication of local parkland in the County. The PLDO establishes several methods by which developers may satisfy their park requirements. Options include the payment of park fees, the dedication of a public park, the provision of private recreational facilities, or a combination of these methods. PLDO funds must be used for the acquisition, planning, and development of local parkland and recreation facilities. Local parks are intended to serve the recreational needs of the communities in which they are located. The proposed project opted for payment of the park fees. Therefore, the project meets the requirements set forth by the PLDO for adequate parkland dedication and thereby reducing impacts, including cumulative impacts to local recreational facilities. The project will not result in significant cumulative impacts, because all past, present and future residential projects are required to comply with the requirements of PLDO. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

With regard to regional recreational facilities, there are over 21,765 acres of regional parkland owned by the County, which exceeds the General Plan standard of 15 acres per 1,000 population. In addition, there are over one million acres of publicly owned land in San Diego County dedicated to parks or open space including Federal lands, State Parks, special districts, and regional river parks. Due to the extensive acreage of existing publicly owned lands that can be used for recreation, the project will not result in substantial physical deterioration of regional recreational facilities or accelerate the deterioration of regional parkland. Moreover, the project will not result in a cumulatively considerable deterioration or accelerated deterioration of regional recreation facilities because even with all past, present and future residential projects a significant amount of regional recreational facilities will be available to County residents.

b)	Does the project include recreational face expansion of recreational facilities, which on the environment?	•
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

No Impact: The project does not include recreational facilities or require the construction or expansion of recreational facilities. Therefore, the construction or expansion of recreational facilities cannot have an adverse physical effect on the environment.

XV. TRANSPORTATION/TRAFFIC -- Would the project:

a)	Cause an increase in traffic which is sub load and capacity of the street system (i. either the number of vehicle trips, the vo congestion at intersections)?	.e., re	sult in a substantial increase in
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

b)	Exceed, either individually or cumulative established by the County congestion m by the County of San Diego Transportation roads or highways?	anage	ement agency and/or as identified
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant With Mitigation Incorporated: The proposed project will result in 48 ADT. The project was reviewed by DPW staff and was determined not to exceed a level of service (LOS) standard at the direct project level for the following reasons: The proposed project would generate 48 trips. Given the County's traffic thresholds (Table 1) 100 ADT on a road operating at LOS F and 200 ADT on a road operating at LOS E there would be no direct impacts to a road segment. Using SANDAG's estimate for AM and PM peak hour trips, the project would generate less than five peak hour trips

and will not exceed the five additional trips to a critical move threshold - especially when the trips are distributed on the road network. Therefore, the project will not have a

the trips are distributed on the road network. Therefore, the project will not have a significant direct project-level impact on the LOS standards established by the County congestion management agency for designated roads or highways.

However, the County of San Diego has developed an overall programmatic solution that addresses existing and projected future road deficiencies in the unincorporated portion of San Diego County. This program includes the adoption of a Transportation Impact Fee (TIF) program to fund improvements to roadways necessary to mitigate potential cumulative impacts caused by traffic from future development. This program is based on a summary of projections method contained in an adopted planning document, as referenced in the State CEQA Guidelines Section 15130 (b)(1)(B), which evaluates regional or area wide conditions contributing to cumulative transportation impacts. Based on SANDAG regional growth and land use forecasts, the SANDAG Regional Transportation Model was utilized to analyze projected build-out (year 2030) development conditions on the existing circulation element roadway network throughout the unincorporated area of the County. Based on the results of the traffic modeling, funding necessary to construct transportation facilities that will mitigate cumulative impacts from new development was identified. Existing roadway deficiencies will be corrected through improvement projects funded by other public funding sources, such as TransNet, gas tax, and grants. Potential cumulative impacts to the region's freeways have been addressed in SANDAG's Regional Transportation Plan (RTP). This plan, which considers freeway buildout over the next 30 years, will use funds from TransNet, state, and federal funding to improve freeways to projected level of service objectives in the RTP.

The proposed project generates 48 ADT. These trips will be distributed on circulation element roadways in the unincorporated county that were analyzed by the TIF program, some of which currently or are projected to operate at inadequate levels of service. These project trips therefore contribute to a potential significant cumulative impact and mitigation is required. The potential growth represented by this project was included in the growth projections upon which the TIF program is based. Therefore, payment of the TIF, which will be required at issuance of building permits, in combination with other components of the program described above, will mitigate potential cumulative traffic impacts to less than significant.

In order to mitigate its incremental contribution to significant cumulative traffic impacts, the proposed project will pay the TIF prior to obtaining building permits.

	TILITIES AND SERVICE SYSTEMS '		• •	
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

Less Than Significant Impact: The project proposes to discharge domestic waste to on-site wastewater systems (OSWS), also known as septic systems. The project involves four single-family residences using standard septic systems located on-site. Discharged wastewater must conform to the Regional Water Quality Control Board's (RWQCB) applicable standards, including the Regional Basin Plan and the California Water Code. California Water Code Section 13282 allows RWQCBs to authorize a local public agency to issue permits for OSWS "to ensure that systems are adequately designed, located, sized, spaced, constructed and maintained." The RWQCBs with jurisdiction over San Diego County have authorized the County of San Diego, Department of Environmental Health (DEH) to issue certain OSWS permits throughout the County and within the incorporated cities. DEH has reviewed the OSWS lay-out for the project pursuant to DEH, Land and Water Quality Division's, "On-site Wastewater Systems: Permitting Process and Design Criteria." DEH approved the project's OSWS on April 1, 2004. Therefore, the project is consistent with the wastewater treatment requirements of the RWQCB as determined by the authorized, local public agency.

	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The project requires water service from the Valley Center Municipal Water District. A Service Availability Letter from the Valley Center Municipal Water District has been provided, indicating adequate water resources and entitlements are available to serve the requested water resources. Therefore, the project will have sufficient water supplies available to serve the project.

,	Result in a determination by the wastew may serve the project that it has adequate projected demand in addition to the proven	ite cap	pacity to serve the project's

(septic	No Impact: The proposed project will rely completely on an on-site wastewater system (septic system); therefore, the project will not interfere with any wastewater treatment provider's service capacity.				
,	Be served by a landfill with sufficient per project's solid waste disposal needs?	mitted	d capacity to accommodate the		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		

Discussion/Explanation:

Less Than Significant Impact: Implementation of the project will generate solid waste. All solid waste facilities, including landfills require solid waste facility permits to operate. In San Diego County, the County Department of Environmental Health, Local Enforcement Agency issues solid waste facility permits with concurrence from the California Integrated Waste Management Board (CIWMB) under the authority of the Public Resources Code (Sections 44001-44018) and California Code of Regulations Title 27, Division 2, Subdivision 1, Chapter 4 (Section 21440et seq.). There are five, permitted active landfills in San Diego County with remaining capacity. Therefore, there is sufficient existing permitted solid waste capacity to accommodate the project's solid waste disposal needs.

g) Comply with federal, state, and local statutes and regulations related to solid waste?

Discuss	sion/Explanation:					
Less T	han Significant With Mitigation I	ncorp	orate	ed: Per the instructions for		

Less Than Significant With Mitigation Incorporated: Per the instructions for evaluating environmental impacts in this Initial Study, the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory were considered in the response to each question in sections IV and V of this form. In addition to project specific impacts, this evaluation considered the projects potential for significant cumulative effects. Resources that have been evaluated as significant would be potentially impacted by the project, particularly a narrow wetland/riparian habitat area that contains southern willow scrub vegetation. However, mitigation has been included that clearly reduces these effects to a level below significance. This mitigation includes placement of the wetland/riparian habitat area into a biological open space easement for protection. The easement will include a 50-foot wetland buffer and a 100-foot limited building zone along the riparian habitat

area. As a result of this evaluation, there is no substantial evidence that, after mitigation, significant effects associated with this project would result. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.

Does the project have impacts that are individually limited, but cumulatively

r r	considerable? ("Cumulatively considerable" means that the incremental effect a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable futu projects)?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		

Discussion/Explanation:

h)

The following list of past, present and future projects were considered and evaluated as a part of this Initial Study:

PROJECT NAME	PERMIT/MAP NUMBER
MOWREY SECOND DWELLING UNIT	ZAP 98-003
SOTELO, 4-LOT TPM	TPM 20274
HEATH AIR PARK-MODIFICATION	P73-188W ²

GAGAVALLI, 2-LOT TPM	TPM 21101
MC BRIDE, 2-LOT TPM	TPM 21103
ROBINSON, 4-LOT TPM	TPM 21105

Discussion/Explanation:

Less than Significant With Mitigation Incorporated: Per the instructions for evaluating environmental impacts in this Initial Study, the potential for adverse cumulative effects were considered in the response to each question in sections I through XVI of this form. In addition to project specific impacts, this evaluation considered the projects potential for incremental effects that are cumulatively considerable. As a result of this evaluation, there were determined to be potentially significant cumulative effects related to Transportation and Traffic. However, mitigation has been included that clearly reduces these cumulative effects to a level below significance. This mitigation includes payment of the Transportation Impact Fee. As a result of this evaluation, there is no substantial evidence that, after mitigation, there are

February 7, 2008

cumulative effects associated with this proj	ect. Therefore, this project has beer
determined not to meet this Mandatory Find	ding of Significance.

Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?					
Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact			

Discussion/Explanation:

Less Than Significant With Mitigation Incorporated: In the evaluation of environmental impacts in this Initial Study, the potential for adverse direct or indirect impacts to human beings were considered in the response to certain questions in sections I. Aesthetics, III. Air Quality, VI. Geology and Soils, VII. Hazards and Hazardous Materials, VIII Hydrology and Water Quality XI. Noise, XII. Population and Housing, and XV. Transportation and Traffic. As a result of this evaluation, there were determined to be potentially significant effects to human beings related to the following Transportation and Traffic. However, mitigation has been included that clearly reduces these effects to a level below significance. This mitigation includes payment of the Transportation Impact Fee. As a result of this evaluation, there is no substantial evidence that, after mitigation, there are adverse effects to human beings associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.
